INDUSTRIES, INC.

## WHEN PERFORMANCE COUNTS...

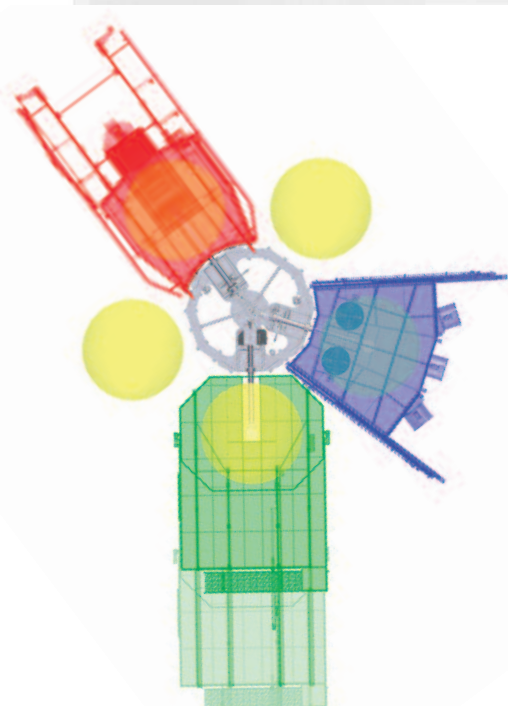

## OPERATOR WORK PLATFORMS

Ferry's work platforms provide stable, elevated work space for operators, materials, hand tools and equipment used to service rotational molding machine arms and molds. Ferry manufactures platforms for Fixed-Arm Turret Carousels, Independent-Arm Carousels and In-Line Shuttle Machines. Single station and dual station configurations are available. Special platform designs on request.

The Ferry Automated Work Platform range provides a work environment that enables your team to improve productivity.

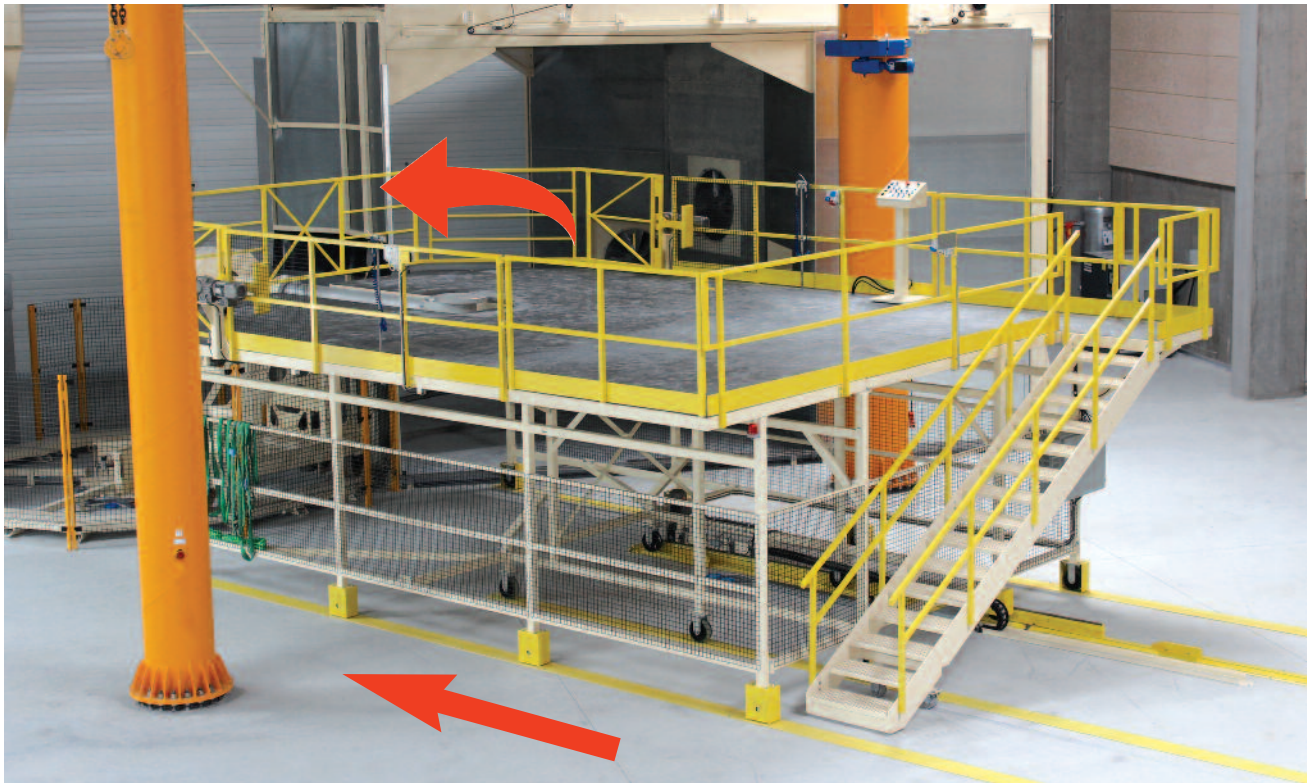

### **Standard features of Ferry platforms include:**

- Platforms move with electric gear-motor power
- The platform deck covers the entire space for the mold swing
- Operators have a full 360-degree access to the molds
- A two-position "roll-over" safety gate automatically positions itself on the backside of the spider to prevent operators from falling off the platform. Before the platform is retracted, the gate returns to the rest position, preventing operators from falling when the platform is "out"
- Safety controls restricts the arm from rotating on either axis (arm & plate) and the carriage is prevented from indexing while the platform and the rollover gate are in place
- Ferry's platforms help quicken turnaround at the load/unload stations
- Helps reduce operator fatigue
- Platforms have perimeter handrails and stairs and can be enhanced with hose reels, tool boxes, product chutes for discharge and other user features

5 Station independent-arm machine with 3-arms and carts. The platform shown at the Service Station is illustrated in the forward position.

# FERRY OPERATOR WORK PLATFORMS

Shown above is a single-station traveling platform in position to service the arm with the roll-over safety fence indexed forward.

Shown above is the platform moved back from the arm with the roll-over safety fence indexed rearward.
