

WHEN PERFORMANCE COUNTS...

REMOTE CONTROL ARM & PLATE JOG

Increase efficiency and reduce operator fatigue during the load and unload cycles of your molding operations. These remote controls provide arm & plate jogging in the operators' hands, allowing them to rotate major & minor axis position quickly for mold servicing and part unloading.

Simplify the service station access and controls with these wireless remote systems. Reduce need for plate axis clutch dependency while enhancing operator accessibility to molds and spiders in the unload and loading stations.

Advantages:

- Optional on new machines
- Retrofit to existing Ferry RotoSpeed carousel, shuttle & rocking oven machines^o
- Jog arm or plate without standing at the machine operator podium for that station
- Operators have 360-degree rotation control for access to the molds
- Also provides high & low inner-air pressure circuit testing
- Reduced operator traffic and travel distances to complete service work
- When in use safety override disables the podium controls for that station; toggle between wireless remote or operator podium control
- Each station has a main control unit and comes with two hand-held remotes for that station
